Rubber Rotors

Proprietary rubber molding techniques, which include bonding the rubber to the metal core, increases life expectancy of DSO rotors.

DSO manufactures all new pump rotors using cast steel cores. The cast steel eliminates cracking at the core. The lobes beneath the rubber are either stainless steel or aluminum depending on the original OEM specifications.

New, exchange or reconditioned options are available to meet customer requirements.

Hot and cold service options are available.

Rubber rotors are available in Buna, EPDM, FKM and metal detectable compounds.

3-A number 18-03 tested and certified.

Three economical purchasing options through DSO™

NEW – New cast steel cores and steel or aluminum bodies with rubber bonded to the metal.

EXCHANGE – Recycle existing rotors and receive a NEW discounted replacement rotor.

RECONDITIONED – Used rotors are recycled, cleaned and inspected prior to being re-coated with new 3-A tested and certified rubber.

As a trusted supplier, DSO is compliant with and maintains the following certifications:

- USDA and 3-A Sanitary Standards - 3A Number 18-03
- U.S. Code of Federal Regulations Title 21, Paragraph 177.2600 and 177.1550
- U.S. Pharmacopeia Class VI Certification
- ASME-BPE Standards
- ADI - Animal Derived Ingredient Free
- Phthalate free
